

## Bulletin Volume 183-197

Filesize: 2.33 MB

### ***Reviews***

*A whole new eBook with a brand new point of view. It is definitely simplistic but shocks in the 50 percent of the publication. I am just pleased to explain how this is the greatest ebook i have read during my very own daily life and could be he best ebook for possibly.*

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 166 pages. Dimensions: 9.7in. x 7.4in. x 0.3in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1922 Excerpt: . . . higher on the prozone, cut by two transverse incisions making two lobes on the prozone, the front lobe longer. Lateral carina evident on the metazone, but much broken or absent on the prozone. Kirby<sup>10</sup> lists seventy-one species for the genus, including his *Pseudotrimerotropis*, all but eight of which are North American; of the sixty-three North American species all but three are exclusively western. Fourteen species are known to exist in Utah, and no doubt there are others in the state which have not yet been discovered. Authors mentioned above, particularly McNeill<sup>7</sup>, have been freely consulted in the construction of the following key: KEY TO UTAH SPECIES OF THE GENUS TRIMEROTROPIS A. Tegminae plain isabelline, not banded, and spots not segregated into groups extending across the tegminae, B. Lateral lobes of the pronotum with a dentation on the posterior part of the lower border; wings with fuscous band, *Trimerotropis cristata* McNeill, p. 82 BB. Lateral lobes of the pronotum without dentation on the posterior portion of the lower border; wings without fuscous band, *Trimerotropis gracilis* (Thomas), p. S2 AA. Tegminae fasciate with spots more or less definitely arranged in groups or solid bands. B. Wings with the disk yellowish or greenish, never blue and never without a fuscous transverse band. C. Hind tibiae red or yellow, never blue. D. Lateral lobes of the pronotum without a downward projecting tooth on the lower margin. E. Scutellum of the vertex longer than wide. F. Hind tibiae red or orange....
